

BeyondInsight and Password Safe 23.1.1 Release Notes

July 17, 2023

Requirements:

- Requires version 23.1.2.1276 or higher of the BeyondTrust Discovery Agent.

New Features and Enhancements:

This is a maintenance release. There are no new features to note.

Issues Resolved:

- When editing **Scheduled Scan Detailed Discovery Options**, the UI now displays a value in the **Deploy Local Scan Service** dropdown, which accurately reflects the value that was originally set upon scan creation.
- When editing **Scheduled Scan Discovery Options**, the UI now displays a value for the **Limit Accounts Returned** option, which reflects the value that was originally set upon scan creation.
- Registry Monitoring events now show up on the report, and are normalized to the database.
- When customizing the options for a **Detailed Discovery Scan** in the Scan Wizard, no validation error occurs if entering more than 100 users in the **Limit Accounts Returned** option.
- Smart Rule filtering now applies correctly on the **Domain Linked Accounts** grid when a Smart Rule contains an asset Smart Group selection criteria filter.
- Updated the **SSH Session Manual Commands** screen to be consistent with prior versions.
- Logfiles are now being properly generated for the Secrets Safe service.
- The **Manage Ownership** screen in Secrets Safe now assigns ownership of a secret to a Team. When assigning ownership when the Team contained a large number of members, there are no longer graphical issues.
- You can now successfully check out a managed account when the access policy has **Multi-Day Checkout** enabled and there is a time zone difference between the client and server.
- Resolved a grid row details issue (**Asset > Advanced Details > Users**). The **SSH Key Count** field will no longer be zero if there are SSH keys that exist for that user.
- Global keystroke search from the **Completed Sessions** grid has been restored. Additionally, **Quick Filter** search has been added to the **Active Sessions** and **Completed Sessions** grid.
- A password mismatch email is no longer sent upon a test of a functional account if the managed system is unreachable.
- The **PUT Addresses/{id}** API no longer creates a new address, but instead updates the existing entry.
- Unnecessary Smart Rule processing log system entries are no longer written to the database when no changes are applied.
- SSH session is now successful when there is an access policy with a location restriction using an *X-Forwarded-For* entry.
- An access policy configured as *recurring daily on weekdays only* no longer permits a request to occur on a weekend day.

Known Issues:

There are no new known issues in this release.

Note: *Issues discovered after release can be found within our product Knowledge Base at https://beyondtrustcorp.service-now.com/csm?id=csm_prod_kb_view.*
