BeyondInsight and Password Safe 7.1.0 Release Notes

October 13, 2020

New Features and Enhancements:

- **Password Safe:**

  ○ Team Passwords is a new feature designed to address the immediate need to list credentials owned by small groups away from Excel spreadsheets and sticky notes into a controlled environment.

- **General:**

  ○ This release does not support Vulnerability Management functions.

  ○ This release does not include support for the following functions. If you require this functionality after upgrading to 7.1, please contact support for advice.

    ■ Privilege Management for Unix & Linix Event View, Search, and Session Replay

    ■ Endpoint Privilege Management powered by PowerBroker Session Monitoring Event View and Session Replay

    ■ Endpoint Privilege Management powered by PowerBroker File Integrity Monitoring Event View

  ○ Direct upgrades to 7.1.0 are supported from BeyondInsight versions 6.8.x or higher.

  ○ Adobe Flash Player is no longer required to use any part of BeyondInsight 7.0+

Issues Resolved:

- Resolved an issue where Local EPM Policy users do not get onboarded in some scenarios.

- Resolved an issue where EPM Screenshots do not get purged.

- Resolved an issue where PMUL Events never get processed in a UTC+N Timezone.

- Resolved an issue where Managed Assets cannot be included in automatic purging.

- Resolved an issue where local users expiration status does not get correctly updated on login.

- Resolved an issue where the SamAccountName property is now displayed to help distinguish between users with the same first and last names when searching for users in Active Directory.

- Resolved an issue where Side Panel is not working correctly in IE 11.

- Resolved an issue with grammatical fixes for labels on Configuration Page.

- Resolved an issue where Policy updates while the BeyondInsight database is offline causes EPM clients to lose their policies.

- Resolved an issue where ServiceNow ticketing system does not work when a gateway is in place.

- Resolved an issue where Name of user is not included in audit information when a user is edited.

- Resolved an issue where LDAP logins fail if a CN or group name includes "dc".

- Resolved an issue with adding index to evt_scan_YYYYMMDD to increase performance.

- Resolved an issue where Smart Rules set to target a specific workgroup do not do anything.

- Resolved an issue where asset attribute assignment Smart Rules can cause the database table to hit the maximum entries.

- Resolved an issue where CSV export of grids strips out extra characters.

- Resolved an issue where SQL Server is consuming 99% of CPU.

- Resolved an issue where SSH Host Key validation attempts to validate the Managed System keys and not the Application

Server keys for SSH applications.

- Resolved an issue where Connection Profiles do not send email alerts for Actions "None" and "Block".
