BeyondTrust Password Safe - ECM Plugin 19.2.2 Release Notes

April 7, 2020

New Features and Enhancements:

- Added a configuration option to allow an admin to specify the release duration used when creating a release request in order to retrieve a credential for injection.
- Updated the testing functionality to no longer require **Distinguished Name** be all lower case.
- Added the ability to configure a default domain within the config file (no UI) for cases where the SRA security providers cannot be configured to pass the appropriate domain information.
- Updated the handling of Launcher and SecureApp credential requests to fully utilize the supplied information to work for both database and application typed accounts.
