

Password Safe ECM Plugin 20.0.0 Release Notes

January 20, 2022

New Features and Enhancements:

- Added support for endpoint search and new workflow messages to facilitate launching sessions to these endpoints.
- Added support for new plugin health checks that allow the integration to report to Secure Remote Access (SRA) when the connection to the password vault environment may be unhealthy.
- Added support for plugin capabilities reporting, which allows SRA to enable or disable certain features like endpoint search, depending on what is available in the plugin.

Issues Resolved:

- Reworked internal API client code for better session management under heavy load.
- Addressed an issue which prevented the integration from retrieving SSH keys that did not utilize a passphrase.

Notes:

- Requires ECM version 1.6.0.
