

Password Safe ECM Plugin 20.0.1 Release Notes

April 7, 2022

Issues Resolved:

- Addressed issue in which the user's domain could be ignored during authentication attempts.
- Addressed issue in which the credential list search was inefficient, causing timeouts within Secure Remote Access (SRA).
- Addressed issue in which the plugin was reporting an unhealthy status to SRA when using ECM bundled with BeyondInsight.
- Addressed an issue in which a previous enhancement (in v19.4.2) had the side effect of requiring elevated permissions for the API account; this change has been reverted and another approach taken to acquire the data.

Notes:

- Requires ECM version 1.6.0.
