

# Workforce Passwords Browser Extension 23.3.0.2 Release Notes

January 30, 2024

## Requirements

Requires BeyondTrust Password Safe version 23.2.0 or later release.

## New Features and Enhancements:

This release does not add any new functionality. However, it adds support for the Firefox browser and adds the Workforce Passwords extension to the Firefox Add-Ons store.

## Issues Resolved:

- Improved field detection reduces the number of false positives without reducing the number of correctly identified login fields.

## Known Issues:

- If the Password Safe URL configured in Workforce Passwords does not match the URL that SAML redirects to, then the Workforce Passwords login does not work.
  - **Workaround:** This is expected behavior. To avoid this situation, ensure that the Password Safe URL configured in Workforce Passwords matches the SAML redirect URL.
- When adding a new credential to Workforce Passwords from the website that you've just logged into, a simple form of the URL for that site is stored by default. If the URL won't work without the parts that are trimmed off, the credential won't work by default.
  - **Workaround:** Edit the **URL** field of the credential in Secrets Safe to include the full URL as required by the target site. This is being resolved for an upcoming release.
