

BeyondInsight for Unix and Linux 9.4.2 Release Notes

February 4, 2021

New Features and Enhancements:

- A complete LDAP connection string can be supplied as an alternative to BIUL building the connection string via provided data.

Issues Resolved:

- Resolved issue sending incorrect certificate format when assigning PMUL log servers to Solr indexing.
- Resolved issue in policy variables that had the same name as event fields were treated as if they were those event fields.
