

Privilege Management Cloud 23.4 Release Notes

May 23, 2023

This release notes document covers the following:

- [Privilege Management Cloud](#)
- [PM Cloud Windows Adapter](#)
- [PM Cloud Mac Adapter](#)
- [Notes](#)

PM Cloud

New Features and Enhancements:

Policy Editor

- Added supporting license data on the **Utilities > License** page. This new feature provides more detailed information about the licenses added to policy, such as whether they are valid, expired, and when they expire. This helps customers stay up-to-date with their license information and ensures compliance.
- Added a feature which gives administrators the ability to easily copy Windows applications from one App Group and paste the definition into another App Group, providing greater flexibility and convenience.

PM Cloud

- Added the **Applications** grid to Analytics v2, which provides a filterable view of application executions and aggregates user behavior at the application level. Additionally, the **Applications** grid allows users to save customized views for quick and easy access to their most frequently used datasets, enabling them to monitor user behavior and make policy updates accordingly.
- Added a new column to the **Events** grid in Analytics v2, which displays the VirusTotal Score for applications with a hash. This integration with VT Augment allows us to return the HTML content of the widget report for a given observable.
- Improved the onboarding process for computers by automatically assigning them to the default group if a group ID is not provided during installation. This ensures that all computers are appropriately assigned and quickly become operational within the network.
- Improved the computer connectivity lifecycle so that when computers enter the pending deactivation state they are marked as disconnected from PM Cloud. This ensures clarity around a computer's status, which helps to eliminate confusion for computers which have been deactivated, and thus disconnected from the system.
- Enhanced the performance of the Azure AD integration by implementing a more efficient group synchronization process.
- Enhanced the CSV export capability of Analytics v2 to now support up to 10,000 events.

Issues Resolved:

Policy Editor

- Resolved an issue with the Policy XML to ensure the Web Policy Editor build version is correct.

Privilege Management Cloud

- Resolved an issue with authorization requests appearing in ServiceNow but not PM Cloud.
- Resolved an issue on the **Computers** grid where older OS versions were incorrectly being displayed for Mac computers that had been updated to Ventura.
- Enhanced the browser-based navigation experience in Analytics v2 by enabling customers to use the browser's back button for a more familiar and intuitive experience.

PM Cloud Windows Adapter

No updates.

PM Cloud Mac Adapter

No updates.
