Defendpoint ePO Extension Release Notes

Software Version: 5.1.0.10 GA

Document Version: 1.1

Document Date: May 2018

Chapter 1 - Release Notes

- **New Features** detailed below
- **Bug Fixes** detailed below
- **Release Notes** detailed above

1.1 - New Features

74189 - Added a new 'Uninstaller' Application Type. This feature allows end users to uninstall applications from machines managed by Defendpoint.

1.2 - Bug Fixes

- **Policy Editor Specific Bug Fixes** detailed below
- **ePO Report Specific Bug Fixes** detailed below

1.2.1 - Policy Editor Specific Bug Fixes

74535 - The Action drop-down now defaults to 'Block Execution' which matches the MMC Policy Editor.

75472 - The Template button is now correctly disabled on the Edit Application page when adding an Uninstaller Application.

1.2.2 - ePO Report Specific Bug Fixes

73911 - You can now add child or parent applications to policy or update the reputation after you have drilled down from the Discovery > All report.

74151 - You can now select the Shell and Auto advanced filters without receiving an error.

Chapter 2 - Compatibility

This section details the versions of software that this version of the Defendpoint ePO Extension maintains compatibility with.

2.1 - Defendpoint Windows Client

The following Avecto Defendpoint Windows Client versions are compatible with this version of the Defendpoint ePO Extension.

- **Recommended**: 5.1.95.0 GA (not supported with ePO Server 5.9.0 or higher)

> The next release of the Defendpoint client will be supported with ePO Server 5.9.0 or higher.

- 5.0.102.0 (GA)
- 4.4.222.0 (SR4)
- 4.4.199.0 (SR3)
- 4.4.177.0 (SR2)
- 4.4.145.0 (SR1)
- 4.4.92.0 (GA)
- 4.3.50 (GA through to and including SR6)
- 4.1 (GA through to and including SR10)
- 4.0.384 (ePO-WIN10)
- 4.0 (GA through to and including SR7)
- 3.8 (GA through to and including SR11)

2.2 - Enterprise Reporting Database

The following Enterprise Reporting versions are compatible with this version of the Defendpoint ePO Extension.

- **Recommended**: 5.1.21.0 GA
- 5.0.25.0 (GA)
- 4.5.13.0 (GA)
- 4.3.116 (GA)
- 4.1.291 (SR1)
- 4.1.160 (GA)

> Using ePO to query fields, or import events that contain fields, that are not present in Enterprise Reporting database causes an error to be displayed. Fields won't be present in the Enterprise Reporting database if the functionality was implemented in a subsequent release, for example Trusted Application Protection was implemented in Enterprise Reporting 5.0 and the 'Uninstaller' Application Type was implemented in Enterprise Reporting 5.1.

2.3 - McAfee Agent

The following McAfee agent versions are compatible with this version of the Defendpoint ePO Extension.

- **Recommended**: 5.0.6.220
- 5.0.5.658
- 5.0.4.283
- 5.0.3.272 (XP supported)
- 4.8.1938 (P3)

2.4 - McAfee ePO Server Version

The following ePO Server versions are compatible with this version of the Defendpoint ePO Extension.

- **Recommended**: 5.9.1
- 5.9
- 5.3.3
- 5.3.2

2.5 - McAfee Endpoint Security

The following McAfee Endpoint Security versions are compatible with this version of the Defendpoint ePO Extension.

- Endpoint Security (ENS) Adaptive Threat Protection (ATP) v10
- ENS Firewall v10
- ENS Threat Prevention v10
- ENS Web Control v10

2.6 - McAfee MOVE Multi-Platform Client

i   We do not support the agentless version of McAfee MOVE.

The following McAfee MOVE Antivirus Multi-Platform agents are compatible with this version of the Defendpoint ePO Extension.

- MOVE AV[Multi-Platform] SVA Manager 3.6.1.141
- MOVE AV[Multi-Platform] Client 3.6.1.141
- MOVE AV[Multi-Platform] License Extension 3.6.1.141
- MOVE AV[Multi-Platform] Offload Scan Server 3.6.1.141

Chapter 3 - Version History

3.1 - 5.0.25.0 GA

3.1.1 - New Features

35810 - Resilience improvements have been made to the Enterprise Reporting database to better handle unexpected system events, data quality problems or long -term accrual of data.

68667 - Added a new dashboard for Trusted Application Protection (TAP) reporting. Includes the addition of new DLL event Types in relevant reports such as **Events** > **All**.

58708 - Added database caching option to several reports to improve performance. These are Summary, Workstyles, Actions, Target Types, Events, Target Types -> Applications, Action (Elevated, Blocked Passive, Canceled, Other), Target Type (Applications, Services, COM, Remote PowerShell, ActiveX, All), and Discovery. See the Enterprise Reporting Administration Guide to learn how to turn caching on.

3.1.2 - Enhancements

71162 - There have been several branding updates throughout the product.

72082 - You can now view IE Zone tags in the Events > All and Process Details reports.

3.1.3 - Database Bugs Fixed

32633 - The CopyFromStaging stored procedure now correctly handles an unplanned server reboot and terminates cleanly.

66038 - The performance of the Application reports has been improved.

68567 - Resolved an issue that caused upgrades to fail with a 'DPCopyFromStagingLock' error.

69237 - Performance improvements to the PurgeApplications stored procedure.

72563 - Two new indexes have been added for performance improvements.

3.1.4 - Report Bugs Fixed

15071 - The correct date format is now shown on the Summary page.

66866 - Instances of 'Privileged Account Protection' have been changed to 'Privileged Account Management'.

72127 - The correct date format is now used on the ErpEventReport page.
