

# Privileged Identity - ECM Plugin 19.2.2 Release Notes

January 14, 2020

## Issues Resolved:

- Addressed an issue which could prevent the plugin from recognizing that a cached authentication token had expired and needed to be refreshed.
- Updated the testing functionality to no longer require Distinguished Name be all lower case.
- Added a workaround for a bug discovered in the Privileged Identity (v 5.5.5.1) REST API for stored credential searches.

## Notes:

- Compatible with Privileged Identity 5.5.4.1+.
- Requires ECM 1.2.4+.
