

# Privileged Identity 5.5.5.3 Release Notes

March 31, 2020

## New Features and Enhancements:

- Filters in Jobs no longer require **ID:** and a Job ID column has been added.
- Added the ability to add an asset tag to a stored credential when adding the stored credential through the web app.
- Added the ability to add systems to management sets when enrolling passwords through the web app.

## Issues Resolved:

- Resolved an issue in which the DAM client installer was not correctly reading the **LocalAccountName** setting.
- Resolved an issue in which Account Filter was not working properly when a user was assigned **Per Account Permissions**.
- Resolved an issue with not being able to edit **External Account** types.
- Resolved an issue with certificate authentication auto-logon.
- Resolved an issue with managing passwords in newer versions of MySQL and MariaDB.
- Resolved an issue in which the prerequisite checker was not detecting .NET Core.
- Resolved an issue in which limiting the number of historical passwords was not removing some of the passwords.
- Resolved an issue in which the **Message Details** window was showing the **Operating Result** numeric value instead of a readable status message.

## Notes:

- PI 5.5.5.3 exe installer SHA 256 checksum:  
9B9AA50C84FFAD4FB57166517463B85C30E15B921C6463B81BBCE791FEF7408D.
- PI 5.5.5.3 supports upgrades from 5.5.3.0+.
- PI 5.5.5.3 supports BeyondTrust PI ECM Plugin 19.3.1.
