

Android Access Console 2.2.3 Release Notes

July 19, 2016

New Features and Enhancements:

- With **Command Shell Access from Mobile**, the Android access console now has the capability to access the command shell for Windows and Shell Jump sessions.
- **Credential Injection from Mobile** allows Android access consoles to support automatic credential handling for Windows login and the Special Actions "Run As" option.
- **Advanced Web Access** enables administrators to appropriately manage privileged access controls over assets that use modern web technology in a secure, scalable, and controlled manner.

Issues Resolved:

- Resolved an issue with being prompted twice for a password when starting a Jump Item.
- Resolved an issue with the Tag field not displaying in the Jump Item details.

Requirements:

- Runs on Android 4.0.3+.
- Compatible with PAM 15.2.1+.
- A trusted CA-signed certificate must be installed on the appliance.

Notes:

- The Bomgar Android Access Console is available on [Google Play](#).
