Base 4.4.1 Release Notes

May 10, 2016

Requirements:
- This version of the Base Software has been certified for physical Bomgar Appliances (B200, B300, B300P, & B400), virtual Bomgar Appliances (VMWare & Hyper-V), and cloud deployment models.

New Features and Enhancements:
- Base 4.4.1 now supports the Hyper-V Virtual Appliance.

Issues Resolved:
- Resolved an issue with the RAID alarm mistakenly going off after rebooting a B300v3 appliance.
- Resolved an issue with the language dropdown menu not being available on some appliance models.
- Updated the email configuration error messages to be more relevant to users.
- Resolved an issue where navigating to the /appliance interface from the /login interface would result in an error.
- Resolved an issue where adding port 80 or 443 to the server listen ports could cause lost connections.
- Resolved an issue where clicking on certain tabs in the /login interface would cause errors when using Internet Explorer 11.

Notes:
- Base 4.4.1 requires Base 4.2.2 for upgrades for all deployments models except Bomgar Connect.
