

Base 5.3.0 Release Notes

May 22, 2018

Requirements:

- This version of Bomgar has been certified for physical Bomgar Appliances (B200, B300 & B400), virtual Bomgar Appliances (Azure, VMWare & Hyper-V), and cloud deployment models.
- Requires Base software 5.0.0+ for upgrades.

Issues Resolved:

- MTU size is now enforced to not accept a value less than 1280.
- Under certain conditions upgrades would encounter an error if customer was using LDAPS with Connection Agent.
- Includes Meltdown patch.
- Resolved an issue with DARE feature, where key exchange was failing in some conditions.
- Resolved an issue where Atlas/failover feature was failing on some appliance models when using ECDSA certificate.

Known Issues:

- None.
