

Identity Security Insights 23.12

What's New Documentation

Release Date – December 5, 2023

BeyondTrust Identity Security Insights is a powerful solution that helps you protect your organization from identity-driven threats. It leverages machine learning to automatically correlate and contextualize your identity data across on-premises and multicloud environments. This enables you to gain a holistic understanding of your unique identity security posture, and helps you to identify, detect, and respond to threats quickly and effectively.

With Identity Security Insights, your teams have a single source of truth to:

- Identify your greatest identity-driven risks
- Gain proactive recommendations specifically curated for your unique environment
- Detect threats such as lateral movement and privilege escalation

Release Highlights

Visibility into Azure Service Principals helps you assess and reduce identity-driven risks within Azure environments.

BeyondTrust empowers you to gain a deep understanding of your Azure Service Principal accounts through the Accounts summary page. Identify risks, detect threats, and gain proactive recommendations related to Service Principal accounts to effectively safeguard your Azure environment.

UI enhancements drive simplicity and flexibility for users.

We have enhanced both the Detections and Recommendations pages with two tabs: grouped and ungrouped views. The grouped view summarizes detections and recommendations by type, offering an overall view of your security posture. Drill down each item to see a list of relevant instances and streamline the analysis of critical threats without the need to navigate through multiple pages of results. The ungrouped view represents a raw view of individual detections and recommendations, allowing you to use filters such as source, account, and status for customized lists and investigations.

Figure 3 – Flattened Recommendations page

We have updated the Entitlements page, enabling you to customize your view by adding or removing columns in the display grid. Your preferences will be automatically saved, you have the option to reset to the default column view.

Figure 4 – Add or delete columns from the Entitlements page for a customized view.

Additional details make it easier to identify the type and nature of accounts.

BeyondTrust includes additional account attributes and metadata within the Accounts page, making it easier to identify and determine the type and nature of an account. Attributes and metadata vary based on the type and source of accounts.
