AD Bridge 22.2.1 Release Notes

September 27, 2022

New Features and Enhancements:

RHEL 9 Support

- Added RHEL 9 support.
- Added RHEL 9 SELinux policy file. ADB can now be installed and used on Red Hat Enterprise Linux 9 platforms with SELinux enforcing.

Elasticsearch Integration Support

- ECS event mapping improvements.

Password Safe Integration

- Improved conflict resolution in the API.

Issues Resolved:

- Resolved issue in which a segmentation fault occurred when **lsuser -R LSASS ALL** was run on the AIX platform.
- Resolved issue in which a segmentation fault occurred if the supplied SID was not valid.
- Resolved object reference error that could occur when the reporting database connection manager was installed to a non-default location.
- Resolved issue in which Password Safe accounts were not checking in if attempting to issue simultaneous joins.

Notes:

- Additional supported platforms include Debian 11, AIX 7.3, RHEL 9, and SLES 15 SP1-SP3.
- AD Bridge 22.2.1.236 supports upgrades from 10.1.x, 21.x, 22.1.x, and 22.2.x.
