BT Updater 3.1.0 Release Notes

February 14, 2023

New Features and Enhancements:

- Angular rewrite for BT Updater web application.
- Added subscriptions to support new Appliances running on Windows Server 2022.
- Removed certificate pinning.

Issues Resolved:

- Resolved issue in which BT Updater was not processing packages on either of the four Server 2022 (SQL 2019) subscriptions.
- Resolved issue in which the BeyondTrust Discovery Agent was not showing as delivered in BT Updater on Server 2022.

Known Issues:

- The clear cache pop-up confirmation continues to be displayed after the login session has ended.
- When modifying settings via the API, the password can be changed to contain one character only.
- When modifying settings via the API, the email address can be changed to one that does not adhere to format rules.

Notes:

- Requires .NET 4.7.2+.
- This update is available via BT Updater.
