BT Updater 3.1.1 Release Notes

May 4, 2023

New Features and Enhancements:

- Implemented a *Loading* spinner on grids.

Issues Resolved:

- Resolved issue in which the displayed text for **Lock and Unlock Client Subscriptions** did not have the same functionality as the icon.
- Resolved a client subscriptions versioning issue in which changes to one client affected other clients.
- Resolved an issue in which the **Client Subscription** page was missing the client name on the grid.
- Resolved an issue in which user data for check for updates was showing IIS_APPPool\Updatersettings when logged in as btadmin.
- Resolved issue in which it was unclear how to get back to the previous screen when viewing the Client list. The chevron that was pointing in the wrong direction has been updated and made consistent with other listing screens.
- Resolved a display issue that occurred when the server or browser did not have internet access.
- Resolved the issue with the inability to view and update the Lock/Unlock status of an item by clicking the icon and the issue with the Lock/Unlock feature not functioning properly. Additionally, the listing page now accurately reflects the Lock/Unlock status of the items.

Known Issues:

- The clear cache pop-up confirmation continues to be displayed after the login session ends.
- For settings through API, a password can be changed to contain one character.
- For settings through API, an email address can be changed against the format rules.

Notes:

- Requires .NET 4.7.2+.
- This update is available via BT Updater.
