

# Identity Security Insights 23.09.1 Release Notes

September 19, 2023

## New Features and Enhancements:

- Detection instance contexts now provide more information for users when investigating a new detection.
- Detection types supporting Microsoft Active Directory account concerns have been updated.
- Detections and recommendations can now be previewed from their summary screens.

## Issues Resolved:

- Resolved an issue where connectors were timing out.
- Resolved an issue in which Insights failed to save identity reports.
- The Account and Identity Details now appropriately display the associated Entitlement Privileges.
- Button spacing and sizing issues across the UI have been resolved.
- Resolved an issue where Connector Activity History was not sorting by the Success column.
- The My Profile link styling has been corrected.

## Known Issues:

None.
