

Identity Security Insights 24.03 Release Notes

February 29, 2024

New Features and Enhancements:

- GitHub, Google Cloud Platform, and AWS connectors are now available, granting additional visibility into accounts and entitlements across your organization. New connectors can be added from the **Available Connectors** page.
- Webhooks now send detections automatically to your preferred incident response tools. Automatic alerts for existing webhooks can be configured from the selected webhook's configuration page.
- A multi-select option has been added to the Detections and Recommendations grids, enabling bulk status updates to the selected items.
- Support for Group and App entitlement types has been added to the **Key Entitlements** page, increasing insights into application access and group memberships for your configured connectors.

Known Issues:

None.

Notes:

None.
