

Identity Security Insights 24.04 Release Notes

April 2, 2024

New Features and Enhancements:

- Additional operators have been added to exclusion rules, including "starts with," "ends with," "contains," and "includes", allowing for more flexible rules creation. When adding a rule, the detection or recommendation definition value will pre-populate as text is added, enabling the user to select the definition of their choice.
- Webhook integrations now include an option for both basic and bearer authentication support. Up to 10 custom key/value headers can be added to each request.
- Dynamic columns are now available on the Accounts, Identity, Entitlements, Detections, and Recommendations pages. Columns may be shown or hidden via a checkbox submenu to customize the dashboard experience.

Known Issues:

None.

Notes:

None.
