

# BeyondInsight for Unix and Linux 21.2 Release Notes

October 26, 2021

## New Features and Enhancements:

- **Console Auditing Management:**
  - Added middleware to capture user.
  - Added console audit section and session grid.
  - Added session summary grid.
  - Added sessions details to session summary.
  - Added audit models and API.
  - Added new settings to optionally send console audit data to syslog.
- **File Integrity Monitoring (FIM) Reports:**
  - Added FIM reports section and grid.
  - Added report detail section.
  - Added reporting filters to details and reports sections.
- **FIM Execution:**
  - Added FIM Client section and FIM host list.
  - Added FIM landing page to policy section.
  - Added FIM execution client.
  - FIM policy assignment moved to FIM client section, removed from header menu.
  - Added API to execute FIM reports.
- **ADB Management Enhancements:**
  - Added domain leave, delete computer object option to uninstall.
  - Added domain leave action.
  - Added domain join as an optional step for ADB installation.
  - Added domain browser to domain join and install actions.
- **Miscellaneous:**
  - Improved logging for failed SSH connections.
  - Added row menu to policy server list.
  - RBP and script policy sub-navigation is now a single element that redirects based on configuration.
  - Added **uniqueid** as IO log builder variable.
  - Multiple IP addresses can now be discovered in one action.
  - Expiring and expired certificates are highlighted in certificate management grid.
  - Added table of contents configuration to IO log builder in script policy.

## Issues Resolved:

- Added v2 and v3 endpoints to Swagger.
- Resolved profile crash on unknown RNS primary.

- Resolved error rolling secrets when data was empty.
- Updated parsing of **namingContexts** for IDM to retrieve first valid one.
- Cleanup now occurs when an action fails when using delegation.
