

Privilege Management Cloud 22.9 Release Notes

November 29, 2022

New Features and Enhancements:

Web Policy Editor

- Users can now enable Windows Hello for user authentication on Windows Messages.
- Account Discovery interval can now be configured for use with the Password Safe integration.
- The list of locked policies is now ordered alphanumerically. When a user adds a single application via **Add to Policy** in **Analytics**, they are now directed to the application matching criteria screen.

Privilege Management Reporting

- Introduced server-side caching to save previously loaded results and improve page load times. This applies to the following PM Reporting grids: **Events All**, **Process Details**, **Target Types**, and **Discovery** reports.

PM Cloud

- The concept of duplication is no longer seen in the application.
- When a grid is filtered, the parameters are now added to the query string, so when the page is refreshed, all filters are preserved.
- Users can now approve a ServiceNow request for up to 12 months.

Issues Resolved:

Web Policy Editor

- Exclusion character limit increased to 30,000 for parity with the MMC.

Privilege Management Reporting

- Resolved issue with the **Elevation Method** filter. It now displays accurate results on **Events > All**.
- Resolved issue in which applications with Chinese characters in their description on **Target Types** did not show accurate results on **Events All** when drilling down via **Process Count**.
- Resolved issue in which the **Discovery > Requiring Elevation > Elevate/Authorization Method** column dropdown would be empty.
- Resolved issue in which the **HostName** filter did not apply in the **User Report > Top 10 Hosts Target Types** report.

PM Cloud

- Resolved issue in which the adapter installer would hang when IC3Adapter user was not a local user.
- Resolved issue in which policy revision comments overlapped with previous comments in the PM Cloud portal. The line now expands to the size of the comment to remain readable.
- Resolved issue in which ServiceNow integration Auth Requests with long strings aligned incorrectly. Long strings are now truncated.
