Privilege Management Cloud 23.6 Release Notes

August 8, 2023

This release notes document covers the following:

- Privilege Management Cloud
- PM Cloud Windows Adapter
- PM Cloud Mac Adapter
- Notes

Requirements:

- Microsoft .NET Framework 4.6.2 (required to use PM Windows adapter)

> **i** *For more information about Windows or macOS requirements, please see the Privilege Management Release Notes at https://www.beyondtrust.com/docs/release-notes/privilege-management/index.htm.*

PM Cloud

New Features and Enhancements:

PM Cloud

- Added the application detail view into Analytics v2, providing users with trending information about applications. This will assist them in making well-informed decisions regarding policy changes.
- Added endpoint user login information to Analytics v2. This will help users identify and remove unnecessary admin accounts, and encourage operators to prioritize standard user accounts to align with the best practices of least privilege.
- Added *Add to Policy* functionality for the following application types in Analytics v2: Mac Binary (bin), Windows COM Class (com), Windows Control Panel Applet (cpl), Windows Store App (appx), and Windows Service (svc).
- Made the Privilege Management Capture Config for macOS and the Privilege Management Configuration Profile for macOS available for download in the PM Cloud portal from the Privilege Management Installation page.

Issues Resolved:

Policy Editor

- Resolved an issue where users were not being prompted with the *You Have Unsaved Changes* notification when attempting to navigate away from the policy creation screen after making edits.
- Resolved an issue where the **Reporting Options** toggle remained active even when **Raise a Local Event** was set to **OFF** for Windows and Mac Application Rules, as well as Windows On-Demand App Rules and Content Rules.

- Resolved an issue where an *unexpected error* occurred when clicking **Save & Unlock** on a policy, following making edits to application groups or application definitions.

Privilege Management Reporting

- Resolved an issue where the event count between the **Summary** table for **Admin Logons** and **Events All Logons** didn't match.
- Resolved an issue where User Logon events were missing when filtering by **User Name** and **Event Category** on **Events All**.
- Resolved an issue where users weren't able to resize columns on the **Events All**, **Process Detail**, and **Target Type** grids.

Privilege Management Cloud

- Resolved an issue with Analytics v2 grid export functionality where reserved characters were not being properly escaped, resulting in a malformed document.
- Resolved an issue where certain events were unnecessarily being forwarded to SIEM.
- Resolved an issue with session timeouts that was causing PM Cloud to become unresponsive.

Known Issues:

None.

PM Cloud Windows Adapter

New Features and Enhancements:

- Created the Privilege Management Adapter Reset Tool for Windows available for download in the PM Cloud portal from the **Adapter Installation** page. This tool allows for the factory resetting of Privilege Management for Windows and the Windows adapter so that cloning an endpoint is a cleaner process.

PM Cloud Mac Adapter

No updates.
