Defendpoint for Mac 4.2 SR2 Release Notes

1.1. Supported Operating Systems

1.1.1. Defendpoint for Mac Client

> **Platforms**

>> OS X 10.10 Yosemite

>> OS X 10.11 El Capitan

>> macOS 10.12 Sierra

1.1.2. Defendpoint Management Console

> **Platforms**

>> Windows XP SP3+

>> Windows Vista

>> Windows 7

>> Windows 8 / 8.1

>> Windows 10

>> Windows Server 2003

>> Windows Server 2008 / R2

>> Windows Server 2012 / R2

1.2. Prerequisites

1.2.1. For the Defendpoint Management Console:

> Microsoft Core XML Services 6.0 (XP SP2 only) *

> Microsoft Visual C++ 2013 Redistributable *

> Microsoft SQL Server 2008 R2 Native Client (for Event Import Wizard)

Note:

The executable version of the Management Console installation package includes prerequisites marked with *, and will automatically install them as necessary. A link has been provided for the Microsoft SQL Server 2008 R2 Native Client.

1.3. New in this release

1.3.1. Bug Fixes

› 51052 – Fixed an issue that caused an inability to install Creative Cloud components

› 45000 - Fixed an issue that caused Xcode to fail when building projects

Important: Upgrades from older versions of Defendpoint for Mac are not supported in this release. If you need to upgrade an existing version, please ensure that the old version is uninstalled manually prior to installing 4.2 SR1.

To manually uninstall Defendpoint for Mac, use the following command:

```
sudo sh /usr/local/libexec/Avecto/Defendpoint/1.0/uninstall.sh
```
