Privileged Identity 7.2.1 Release Notes

March 31, 2022

New Features and Enhancements:

- Added paging to **get-lslistdelegatinpermissionsonaccount** PowerShell commandlet.
- Added support for general OIDC authentication providers for Privileged Identity.
- Added support for SQL ODBC providers.
- Added an optional feature to force PI to use **ADSetPassword**.
- Added a feature to allow elevation favorites to create a job with a single click.

Issues Resolved:

- Set the default state of the Database Maintenance job affinity to **On**.
- Resolved issue with Azure AD OAuth logins.
- Resolved issue in which PI was not propagating password changes to .NET propagation types.
- Resolved issue in which the Elevation group(s) were not saved to Favorites.
- During a password change operation, the login password for a Custom Account Store now correctly loads in the proper format.
- When using Self Elevation, the system list now populates correctly with a list of available systems.
- Resolved issue in which users with the View Web Activity permissions were not able to see Compliance Reports.
- Resolved issue in which PI logging to Windows Event Log did not persist.
- Resolved issue in which you could not enter a system in the required system field when creating an Elevation job.
