Android Access Console 2.2.4 Release Notes

May 9, 2017

New Features and Enhancements:
- **Android Access Console Enhancements** – Not only does the Mobile Access Console have a great new interface for a better experience, but it also supports SAML authentication for logging in.

Issues Resolved:
- Resolved an issue with logging in to the access console if the contacts permission was denied.
- Resolved an issue with a black screen sometimes appearing after joining a session already in progress.
- Resolved an issue with the access console sometimes unexpectedly stopping upon login.
- More Jump Items details are now shown.

Requirements:
- Runs on Android 4.0.3+.
- Compatible with PAM 15.2.1+.
- A trusted CA-signed certificate must be installed on the appliance.

Notes:
- The Bomgar Android Access Console is available on Google Play.
