

Privileged Remote Access 22.1.3 Release Notes

May 24, 2022

Requirements:

- This version of Privileged Remote Access has been certified for physical BeyondTrust Appliances, virtual BeyondTrust Appliances, and cloud deployment models.
- 22.1.3 PA requires Base 6.2.0.

Issues Resolved:

- Resolved erroneous suppression of notifications on macOS endpoints.
- Removed errant dock icon and menu bar for Mac clients out of session.
- Resolved incorrect injection of left bracket character ([) in Web Jump when using Spanish keyboard layout.
- Resolved SecureApp issues with Bring Your Own Tools (BYOT).
- Improved auto-login bypass on elevated Windows endpoints.
- Resolved crash that occurred in Mac access console during screen sharing when using Chinese keyboard layout.
- Resolved SAML authorization issues with web access console when network restrictions were enabled.
- Resolved Web Jump credential injection issue with specific site.
- Improved Web Jump field detection with specific login frame coding.
- Resolved issue in which access console notifications were missing for new session.
- Resolved potential appliance-side memory leak.
- Restored the ability to share SSH Vault keys.
- Resolved authentication failures involving PingID RADIUS and OTP.
- Resolved 2FA failures on backup node of high availability failover pair.
- Resolved authentication failures when 2FA and network restrictions were both enabled.
- Improved SSH performance in some environments.

Notes:

- Supports upgrades from Privileged Remote Access 21.1.2 PA+.
- Requires Integration Client 1.7.3.
- Requires Endpoint Credential Manager (ECM) 1.6.0.
- 22.1.3 PA includes VSC 1.2.5.3.
- This release is certified with the following mobile versions:
 - [iOS Access Console 2.2.5+](#)
 - [Android Access Console 2.2.10+](#)
