Base 5.0 Release Notes

May 9, 2017

New Features and Enhancements:
- Data at Rest Encryption is now supported.
- Hypervisor info is now displayed when running on a Virtual Appliance.
- DHCP is now supported.
- IPv6 is now enabled.
- Advanced support tunnel has been enhanced.
- TLS certificates are now automatically selected using Server Name Indication (SNI).

Issues Resolved:
- Link Speed and Duplex info are no longer displayed on Hyper-V appliances.
- Resolved an issue with B200R showing on B200P appliances.

Notes:
- Requires Base 4.4.1 or later for upgrades for all deployment models except Bomgar Connect.
