

macOS Ventura Compatibility Statement

Apple has released macOS 13.0 (Ventura) to the market. BeyondTrust has validated the Secure Remote Access (SRA) products, Remote Support 22.3.2 and Privileged Remote Access 22.4.1 maintenance releases, to support this new operating system. An official statement of support for Ventura will be included with Secure Remote Access 23.2. It is recommended that Secure Remote Access customers update to one of these releases or later before upgrading to the Ventura operating system.
