BeyondTrust Endpoint Credential Manager 1.6.0 Release Notes

January 20, 2022

New Features and Enhancements

- Added support for endpoint search and new workflow messages to facilitate launching sessions to these endpoints.
- Added support for new plugin health checks that allow the integration to report to Secure Remote Access (SRA) when the connection to the password vault environment may be unhealthy.
- Added support for plugin capabilities reporting, which allows SRA to enable or disable certain features like endpoint search, depending on what is available in the plugin.
- Added log level configuration to configurator UI.

Issues Resolved:

- Addressed an issue in which the ECM tried to connect to the Appliance even when configuration was empty.

> ⊗ **IMPORTANT!**
>
> *Due to breaking changes in third-party dependencies that were updated as part of this ECM release, please ensure that the plugins used in conjunction with this and future release are listed as compatible with ECM 1.6 or later.*
