Integration Client 1.6.2 Release Notes

September 27, 2016

New Features and Enhancements:
- API accounts are now supported, providing granular definition of account roles and using OAuth 2.0 for authentication.

Issues Resolved:
- Resolved an issue with not being able to write to an access database as a user.
- More information is now included about error messages returned to the integration client from web sessions.
- Sessions that encounter an error during processing are retried
- When a non-admin user changes the notification settings, a message is now shown explaining that a reboot is needed before the changes take effect.

Notes:
- Integration Client 1.6.2 is compatible with:
    - Bomgar Remote Support versions 14.3.1 and greater on physical and virtual appliances.
    - Bomgar Remote Support Cloud versions 15.1.1 and greater.
    - Bomgar Privileged Access Management versions 15.1.1 and greater.
- Metrics-DB Plugin 1.6.2 (987) is certified to work with Integration Client 1.6.2.
- Requires Microsoft .NET Framework 4.5 or later.
