Security Package Update Installer 3.0.5 Release Notes

April 1, 2021

New Features and Enhancements:

- Improved readability of SUPI log files.
- Enhanced handling of multiple packages in progress or pending after appliance reboot.

Issues Resolved:

- Resolved issue in which certain packages could fail to install.
- Resolved issue in which .SUPI files were not removed from hot directory after installation on Server 2012 appliances.
- Resolved issue in which SUPI package install date was being set to the package download date.
- Resolved issue in which updates with a status of In **Progress** and **Failed** were no longer visible on the **View Updates** page after 24 hours.
- Resolved issue in which corruption of **Index.xml** and **ServiceIndex.xml** files caused processing of available updates to fail.
- Resolved issue in which package install status was incorrect when an individual component from a package was not installed.
- Resolved issue in which certain packages could timeout before completion.

Known Issues:

- SUPI Service API allows creating duplicate schedules which breaks processing (not UI).

Notes:

- This update is available via the BeyondTrust Updater or as a manual installer from the download tool.
- The desktop **SUPI.EXE** no longer has a user interface but can still be used at the command prompt to support scripting.
- SUPI 3.0.x is a prerequisite to installing UVM Software 3.2.2 and later.
